

## TACWELD - teflon for the plastic windows and doors production industry

Reko LTD offers a specially developed material for the plastic windows and doors production industry.

This product is applied as a separation layer of the welding machines, where its perfect properties are used.

Anti-adhesive surface

Heat resistance: from - 73°C up to + 260°C, at short-term up to 300°C

Outstanding slipping capacity

Tensile strength: 1500 N/5 cm

Flame resistance

Resistance against the alkali and acids

Frost resistance

Simple cleaning

Applicable bilaterally

Long service life

Simple assembling

High efficiency

Saving on the costs

Reko LTD offers this perfect material as the footage (the reels in meters, each reel being 1000 mm wide) or in the cutting-outs, eventually, in a form of ready protection aids (gloves) as manufactured on the actual customer's demand.

The TACWELD product is offered by Reko LTD in double option – in a normal version and in a self-adhesive version, with the silicone glue.

The TACWLED 69 product and the TACWELD 69 BLUE premium product are offered for vantage prices. Specially important discounts are applicable in purchasing the products in the whole reels (30 m x 1000 mm).

We are ready to provide you with any other information data on the basis of actual request, including the other types of glass-teflon-made fabrics and further application modalities of these materials.
